SUMMARY

Aspiring Software Engineer and BCA student with hands-on experience building full-stack mobile applications (React Native, Firebase) and backend data pipelines (Python, MySQL, MongoDB, REST APIs). Solved 100+ DSA and SQL problems on LeetCode. Seeking a Software Engineer / Full Stack Developer role.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, VBA

Frontend / Mobile: React Native, Expo, Google Maps Integration

Backend & Databases: REST APIs, JSON, Firebase (Cloud Firestore, Storage), MySQL, MongoDB

Cloud & AI: Google Cloud Run, AI Agents (Gen AI Academy Training)

Tools: Git, GitHub, VS Code

Data & BI: Power BI, Tableau, Advanced Excel, Data Cleaning, Data Modeling

Libraries: NLP (NLTK, TextBlob)

Digital Advertising: Google Ads, Meta Ads

PROJECTS

Romfe App | React Native, Expo, Firebase, Cloud Firestore

- Built a dual-module rental application with separate flows for property listing and property discovery based on location and rent.
- Integrated Cloud Firestore and Firebase Storage for multi-image uploads, real-time data synchronization, and multi-currency pricing.
- Implemented Google Maps location tagging and real-time in-app chat between tenants and verified property owners.

ProductPulse AI | Python, Pandas, NumPy, Scikit-learn, MySQL, MongoDB, Excel, Power BI

- Built a multi-source customer analytics platform that ingests data from MySQL, MongoDB, and Excel and performs data cleaning, validation, and business analysis.
- Implemented churn prediction using Logistic Regression and Random Forest, along with K-Means customer segmentation and churn-risk classification.
- Generated AI-based business insights and prepared enriched datasets for MySQL, MongoDB, Excel, and Power BI reporting.

Automated ETL Data Pipeline | Python, REST APIs, MySQL, MongoDB

- Built an automated Python ETL pipeline that extracts nested JSON from REST APIs with error handling and rate-limit logic.
- Wrote validation logic to clean, cast, and structure raw API responses before loading, preventing bad data downstream.
- Automated loading of structured data into MySQL and MongoDB, removing manual ingestion.

Dynamic Pricing Engine | Python, Machine Learning, MySQL, Power BI

- Designed a Python pricing model that adjusts price points based on demand elasticity and market trends.
- Created a MySQL schema to query high-volume transactional data for pricing calculations.
- Built a Power BI dashboard showing margin changes and pricing insights for business stakeholders.

Enterprise Sentiment & Feedback System | Python, NLP, MongoDB, Tableau

- Built an end-to-end pipeline that ingests unstructured JSON customer feedback into MongoDB.
- Implemented NLP text cleaning including tokenization and stop-word removal to classify reviews as Positive, Negative, or Neutral.
- Connected the output to Tableau to map sentiment by geography and flag product issues.

Executive VBA Dashboard & Automation | Advanced Excel, VBA

- Built an interactive Excel dashboard with advanced formulas and structured tables to track core KPIs.
- Wrote modular, error-handled VBA macros to automate monthly reporting and dynamic data filtering.
- Automated report generation in Excel, reducing manual preparation effort.

EDUCATION

Indira Gandhi National Open University (IGNOU) | New Delhi, India

Bachelor of Computer Applications (BCA), 1st Year Completed | 2025 – Present

EXPERIENCE

Deloitte, Data Analytics Job Simulation (Virtual, Forage) | September 2026

- Analyzed data in a simulated forensic technology engagement, identifying trends and patterns to produce structured business insights.
- Drafted reporting that linked technical metrics to corporate governance requirements.

CERTIFICATIONS

- Google Cloud Gen AI Academy APAC 2026 (Cohort 3), powered by Hack2skill: building, deploying, and orchestrating AI agents on Cloud Run (Sept 2026).

ACHIEVEMENTS

- Solved 100+ Data Structures & Algorithms and SQL problems on LeetCode.
